  Bachelor in Computer Science (June 2014- March 2017)

Projects

Azure Data Engineering Demo

• Developed and implemented Azure based data engineering solution for smooth transition to facilitate real-time analytics.
• Designed and transformed data models using Azure Data Lake Storage Gen2 and utilized on-premises SQL Server and Azure data Factory for data extraction.
• Integrated Power BI dashboards with Azure Synapse data sources for real-time data Visualization.
• Integrated CI/CD pipelines with Azure DevOps to automate build, test, and deployment processes.

CI/CD for GKE using Cloud Deploy

• Configured CI/CD pipelines using Google Cloud Build and Cloud Deploy, defining stages to build, test and deployment to GKE cluster.
• For Containerization we made use of Docker component to ensure consistency across environments and integrated with version control system such as GIT to trigger builds on code changes.

Digital Transformation for OEM – Project Management

• Introduced a strategic roadmap for automotive industries to leverage advanced analytics and drive revenue growth to ensure market competitiveness and long-term sustainability.
• Established a 5-year Roadmap and Lifecycle of Customer across automotive purchase and Analytics Framework for cultivating client's success.
